EXPERIENCE

Software Engineer

Northwind Labs

08/2024 - Present Remote, EU

Online bookstore and catalog search

- Shipped a catalog search that lets readers filter books by genre, language, and "has a talking dragon".
- Built a recommendations job that suggests the next novel from what people actually finish, not just what they add to a list.
- Added a reading-progress API so the iOS and web apps stay in sync when someone falls asleep on chapter 12.
- Split a slow homepage query into smaller lookups; typical catalog pages went from "coffee break" to under 200ms.
- Wrote a tiny admin tool for editors to fix author names, cover art, and the occasional book filed under Cooking by mistake.
- Set up basic metrics and alerts when search starts returning zero hits for popular titles.
- Pair-programmed with two new hires on their first production pull requests.

Backend Engineer

Helix Notes

07/2022 - 07/2024 Berlin, Germany

Shared notebooks for small teams

Worked on the sync and sharing backend for a notes app used by design and research teams.

- Designed the note-sync service so two people can edit the same grocery list without duplicating "milk".
- Moved file attachments off the main database into object storage; backups stopped taking all afternoon.
- Added share links with expiry dates after someone pasted a private notebook into a public Slack channel.
- Cut peak memory on the sync worker by caching recent notes instead of loading the whole workspace.
- Introduced request logs and error tracking so "the app ate my note" tickets had a paper trail.
- Ran on-call for the notes API, including the incident where a leap-second made every reminder fire twice.
- Mentored intern projects: tags, full-text search, and a very serious dark mode flag.

SUMMARY

Software Engineer with 8+ years building web products. Comfortable with *APIs*, *databases*, and turning product ideas into something people can actually click.

Also: I like **clear specs**, *boring* deploys, and leaving the next person a README that is actually true.

SKILLS

Python TypeScript REST APIs
PostgreSQL Redis Docker React
Linux Git

Example State University

2011 - 2015

EXPERIENCE

Technical Lead

Parcelly

📅 10/2019 - 07/2022 📍 Amsterdam, Netherlands

Plant-watering reminders for offices

- Led a team of four on an app that reminds offices to water the ficus before it becomes a stick.
 - Replaced a spreadsheet-based plant roster with a real schedule service and a weekly digest email.
 - Worked with ops to add floor maps so the watering route did not skip the third-floor ferns.
 - Migrated the reminder worker from a nightly cron to a queue, which stopped Monday-morning burst emails.
 - Added a simple dashboard: plants watered, plants ignored, plants that somehow acquired names.
 - Ran planning, reviews, and the occasional debate about whether cacti need a snooze button.
-

Software Developer

Brightledger

📅 05/2017 - 09/2019 📍 London, UK

Community library check-out desk

- Built the check-out flow for a small library: scan a book, scan a card, try not to fine the mayor.
- Added overdue reminders and a staff screen for books that have been "almost returned" for three months.
- Helped migrate member records off a shared Access file into PostgreSQL.
